| Medium | 4 | |

Alerts

| Name | Risk Level | Number of Instances |
|--|------------|------------------------|
| Content Security Policy (CSP) Header Not Set | Medium | 7 |
| Directory Browsing | Medium | 2 |
| Hidden File Found | Medium | 2 |
| Missing Anti-clickjacking Header | Medium | 5 |

Alert Detail

| Medium | Content Security Policy (CSP) Header Not Set |
|---------------|--|
| Description | Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross Site Scripting (XSS) and data injection attacks. These attacks are used for everything from data theft to site defacement or distribution of malware. CSP provides a set of standard HTTP headers that allow website owners to declare approved sources of content that browsers should be allowed to load on that page — covered types are JavaScript, CSS, HTML frames, fonts, images and embeddable objects such as Java applets, ActiveX, audio and video files. |

| Instances | 5 | | | |
| | Modern Web browsers support the Content-Security-Policy and X-Frame-Options HTTP headers. Ensure one of them is set on all web pages returned by your site/app. | | | |
| Solution | If you expect the page to be framed only by pages on your server (e.g. it's part of a FRAMESET) then you'll want to use SAMEORIGIN, otherwise if you never expect the page to be framed, you should use DENY. Alternatively consider implementing Content Security Policy's "frame-ancestors" directive. | | | |
